1	ABSTRACT
1	ABSTRAC

A method and apparatus of logging events independently and separately
from other processes in a computer system are disclosed. A method for logging
events by cloning a log entry submitted by a consumer and releasing control of the
log entry to the consumer so that execution of an event may continue is disclosed.
A log manager that receives requests for writing event log entries to a log file while
enabling the execution of the event to continue independently is disclosed.
